Presentation Abstract

Investing in People — The True Value of Talent Through Philosophy With AI

닉 보스트롬 거시전략연구 이니셔티브 창립자 겸 수석연구원 /『슈퍼인텔리전스』 저자 **Nick Bostrom** Founder & Philosopher, Macrostrategy Research Initiative

As artificial intelligence advances, it raises fundamental questions about the future of work, education, and human potential. What does it mean to invest in people when machines can perform an increasing range of intellectual and practical tasks?

In this special dialogue, philosopher Nick Bostrom explores how AI may reshape the capabilities we cultivate and the goals that guide human development. The conversation considers both the demands of a changing world of work and the longer-term possibility of a future in which economic productivity plays a smaller role in human life.

At its heart is the question of how people can lead meaningful and fulfilling lives amid profound technological change. Reflecting on the role of philosophical inquiry, thoughtful judgment, and personal initiative, the session invites a broader understanding of investment in people—one that encompasses not only professional competence, but also the capacity to learn, pursue worthwhile goals, and live well.
