Presentation Abstract

인공지능 시대, 교육은 어떻게 변화해야 하는가?
How Should Education Transform in the Era of Artificial Intelligence?

라파엘 레이프 매사추세츠공과대학교(MIT) 명예총장 **L. Rafael Reif** President Emeritus, Massachusetts Institute of Technology

In 2018, MIT broke new ground when it created the Schwarzman College of Computing. One of its key goals was educating “computing bilinguals”: making sure that MIT students graduate with fluency in their disciplines of choice, but also fluent in AI to advance those disciplines. This remains the right educational model, but clearly LLMs and now agentic AI are raising new questions about talent development. Employers have new choices and are deciding when and how to use AI agents—and when and how to use humans. At the same time, the widespread use of AI by students has threatened learning. In his opening remarks, MIT President Emeritus L. Rafael Reif will consider the goals that universities and individual professors should be reaching for, in preparing their students for this new world.
