Presentation Abstract

Compounding Momentum: How AI Agents Are Reshaping Work, Roles and Leadership

마크 루이스 아마존웹서비스(AWS) 아시아태평양·일본 및 중국(APJC) 월드와이드 스페셜리스트 조직(WWSO) 디렉터
Mark Lewis Director, Director, Worldwide Specialist Organization, Asia Pacific, Japan & China, Amazon Web Services

Every organisation now has access to the same AI. So why are some pulling ahead while others stand still? The advantage has shifted from the model to the context around it: the institutional knowledge, judgement and decision history that no competitor can replicate. AI is advancing faster than organisations can absorb it. The winners will not deploy the most tools; they will encode how their business actually works. Grounded in that context, AI agents stop behaving like software and start working like colleagues: coordinating work, learning from every decision, and improving with every cycle. This is compounding momentum, and it is your differentiator. For people, roles are not disappearing, they are being redesigned. Managers are moving from supervising tasks to leading teams of people and agents. This session shares what Amazon has learned from working this way, and what HR leaders can do now to build momentum of their own.
